                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1000 bp mRNA linear EST 12-MAR-2002

(ggccattatggcc); Double-stranded cDNa was prepared from cell line RNA. 5' and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 5'-ATTCTACAGGCCGACGACATG-4T(30)BN-3' (where B = A, C, of and N = A, C, G, or T). Average insert size 1.65 kb (range 0.9-4.0 kb). 14/15 colonies concained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                602257174F1 NIH_MGC_85 Homo Bapiens cDNA linear EST 12-JAN-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       90
                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), protessed DNA habr2072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The first oligonucleotide is specific for a cytoplasmic oncogene or proto-oncogene selected from ras, raf, EGF-1, cfms, c-ros, c-kit, c-met, c-trk, c-src, c-abl, c-rabl, c-fgr and c-yes. The second oligonucleotide is specific for a nuclear oncogene or proto-oncogene selected from myc, jun, c-ets, c-fos, c-myb, B-myb, c-rel, c-vay, c-ski, c-spi, cyclin Dl, PML/RAR alpha , AMLL/MTG8, EZA/prl and ALI-/AF4. The composition is used for treating cancer. The combination of antisense oligonucleotides has synergistically enhanced ability to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

AAA09303-09 were isolated in a modified yeast two hybrid system using NIK1 procein as "bait". These are known sequences which encode NIK1 interacting proteins. The invention concerns purified complaces of a NIK1 protein-interacting protein, where the interacting protein is chosen from TrKA, protein phosphatase lalpha, 14-3-3epsilon, alpha-tropomyosin, vimentin, p0071, Ini-1, IP-1, IP-2, IP-3, IP-4, or IP-5. NIK1 (also referred to as NeK2) is a human homologue of the Aspergillus nidulans microtic regulator, NIWA kinase. NIK1 is a serine/threonine-specific kinase and is thought to play a key role in cell-cycle events leading to the onset of mitosis. The complexes, their derivatives and NIK1 or NIK1-IP protein and DNA sequences, etc. are useful for treating or preventing a disease or disorder involving aberrant levels of the complex or protein. Such disorders include cancer,

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating compound that regulates the activity of one or more of polyneptides or their antibodies. The polynucleotide or the compound that composition or small molecule that regulates the specification, a method for identifying a compound useful in treating compoulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more of pain and spared nerve injury (SNI) in an animal (e.g. gene modulates its activity is useful for preparing a medicament for the specification) which is differentially expressed during pain. Note: The specification, but was obtained in electronic form directly from MIPO at the pain in the specification of the print of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 343

diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or neurodegenerative disorders, or polypeptides comprishing an amino acid sequence at least 95% identical to the new Sequences. The polypeptides, antibodies or antibody fragments that bind to the polypeptides, nucleic acids encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune compositions fe.g. gastric, ovarian or lung cancer, CNS disorders (e.g. gastric, ovarian or lung cancer), cancers (e.g. gastric, ovarian or lung cancer), and disease, clasorders (e.g. parkinson's disease or Alzheimer's disease), and cardiovascular disorders (e.g. atherosclerosis or incurdes or myocarditis). The capping, for controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identifying individuals from minute biological samples, in forensic blology, and as hybridization or antisense DNA or RNA, in gene therapy for identifying individuals grobes. The polypeptides are useful for as molecular weight markers on controlling early and se hybridization cor antisense antibodies, for testing biological activities, and for testing processes, and for testing processes, and for testing biological activities, and for testing biological activities, and for testing the descriptory and the processes or testing biological activities, and for testing biological activities, and for testing the descriptory and the processes or testing biological activities, and for testing the descriptory and the processes or testing biological activities, and for testing the descriptory and the processes or testing belongians and the processes or testing biological activities, and the processes or testing belong treating or preventing neural disorders, immune system disorders, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, proliferative and/or cancerous diseases. This sequence corresponds to a gene encoding one of the polypeptide of the invention. Note: The sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from WIPO at The invention relates to 592 new human secreted polypeptides useful for New human secreted polypeptides and polynucleotides, useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or ftp.wipo.int/pub/published\_pct\_sequences Claim 21; SEQ ID NO 319; 1754pp; English neurodegenerative disorders

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human; 811 871 104 872 CCTATGATAATGGAGAACATCCAGGAGCTCATCGATCAGCCCCAGGAAATAGATG 931 -----ArgSerGluThrGluTyrAlaLeuLeuArg 114 ||||:::||||||||::: 932 AATGAAATATATGATGAGAACTCCTACTGGAGAAAACCAAAACCCTGGCAGCTCCTGCAG 991 751 80 64 Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue 25 AspGluGluArgLysArgGlnGluMetThrTheGluArgLysLeuGlnAspGlnAsp 44 45 LysLysSerGlnGluValSerSerThrSerAsnGlnGluAsnGlySerGlySer 752 AAGGAGGGAGGCTGTGTCTCAGCTGCAGACAGACTCAGAGCCCAAGTTTCACTCT 812 GAATCTCTATCTACCTTCCTCTTTTGCTCCCGGGTACGAGAAGTAGAGTACT 632 CAAGGAGTGGAGCACAĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĀĀĀĀĀĠĀĠĀĀĀĠĀĠĀĀĀ 65 GluGlu------ValCysTyrThrValIleAsnHisIleProHisGlnArgSer -----GluAsnIleAspSerLeuThrArgLysValArgGlnPheArgGlu---81 ---SerLeuSerSerAsnAspAspGlyTyr------Human soft tissue sarcoma-upregulated DNA - SEQ ID 7762. The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind are useful for preparing a diagnostic or paramaceutical composition for diagnosing or treating allergic or asthmatic disorders. The polypeptide is also useful for identifying a binding partner by contacting the polypeptide with a binding partner, and determining whether the binding partner increases or acid molecules are also useful for detecting, preventing, diagnosing, prognosticating, treating or ameliocating inflammatory disorders prognosticating, treating or ameliocating inflammatory disorders neoplastic diseases , wound healing and disorders of epithelial cell proliferation, immune disorders, cardiovascular disorders, blood-related

          disorders. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping, as molecular weight markers, or as hybridization or diagnostic probes. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues

thrombocytopenia), allergic reactions including asthma or eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury, inflammatory bowel disease or Crohn's disease), neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), cardiovascular disorders (e.g. atherosclerosis, myocarditis), infectious diseases (bacterial, fungal or viral infections including HIV/AIDS), or wound healing and disorders of epithelial cell proliferation. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping, as molecular weight markers, or as hybridization or diagnostic probes. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunohistochemistry assays. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antianaemic; antirheumatic; antiarthritic; antiinflammatory; antithyroid; antidiabetic; immunosuppressive; dermatological; nephrotropic;

the invention transfer to a nover number section prolypeptica.

defined sequence given in the specification. The polypeptica, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnoshing or treating a haemopoietic or haematologic disorder such as anaemia, autoimmune disorders such as rheumatologic disorder such as anaemia, autoimmune disorders such as rheumatologic disorder such as anaemia, autoimmune clabetes systemic lupus erythematosus or glomerulomphiritis, neurodegenerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including atherosclerosis or cancer, as well as bacterial, viral, fungal or atherosclerosis or cancer, as well as bacterial, viral, fungal or berseitic infections. The polypeptide any also be used during gene the polypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           631
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CAAGGAGTGGAGCACAGGAGGCGACACAAGAACACAAGGAGGAAAGAGGGGGCAAAAA 691

```

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAZ24802) for increasing the stability of the fused protein as genes and their fragments (nucleic acid sequences: AAZ24811-Z24907; amino acid sequences AAY41308-Y41404) which are useful for preventing, treating or amelioraring medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the in (see AAZ24811 for described uses) Sequence 1892 BP; 461 A; 565 C; 472 G; 394 T; 0 U; 0 Other;

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Ruben SM;

WPI; 2003-175238/17.

New human secreted proteins and nucleic acid molecules, useful for preparing a diagnostic or pharmaceutical composition for diagnosing, preventing or treating cancer or other hyperproliferative disorder, asthma, allergies or AIDS.

Claim 9; SEQ ID NO 322; 3205pp; English

The invention relates to novel genes ADA39629-ADA40565 and proteins ADA40566-ADA41501 for human secreted proteins, useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind to the polypeptide are useful for preparing a diagnostic or pharmaceutical composition for diagnosing or treating cancer or other hyperproliferative disorder. The polypeptides and nucleic acid molecules are also useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating cancer or other hyperproliferative disorders including neoplasms, autoimmune disorders (e.g. diabetes, rheumatoid arthitis, systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis or haemolytic

forensies, gene mapping, medical imaging, identification of mutations responsible for genetic disorders or other traits, assessing biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cell periodontal disease, liver fibrosis, infections (e.g. viral, fungal or bacterial) or autoimmune diseases (e.g. diabetes, atopic dermatitis). Sequences ABX04986-ABX05311 represent human polymucleotides of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the Buropean Patent Offlice
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       565
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       88

The invention comprises the amino acid and coding sequences of human

Secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are

Secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are

Secretory (SPTM) proteins. The SPTM DNA sequences are useful for somatic or

C functional SPTM. The SPTM DNA sequences are useful for somatic or

C combined immunodeficiency). The SPTM DNA sequences are also useful in

D providing protection against intracellular parasites (e.g. fungal

C parasites and protezoan parasites). The SPTM DNA and protein sequences

C are also useful for diagnosing cell proliferative disorders, cancer,

C immune disorders (e.g. AIDS), neurological disorders (e.g. Parkinson's

C disease), motor neuron disorders, demyellnating diseases (e.g. multiple

CC sclerosis), menightis, abscesses, prion diseases, cerebral palsy,

C neuroskeletal disorders, peripheral nervous system disorders,

C dermatomyositis and polymyositis, myopathy, myasthenia gravis, and mental

disorders (e.g. Tourette's syndrome). CDNA sequences ABL99910
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polynucleotide sequences encoding human secretory proteins useful for gene therapy of e.g. genetic deficiency disorders, cancers, and diseases caused by intracellular parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Stuart J, Lincoln SE, Altus CM, Dufour GE, Chalup MS, Hillman JL; Jones AL, Yu JY, Wright RJ, Gietzen D, Liu TF, Yap PE, Dahl CR; Momlyama MG, Bradley DL, Rohatgi SD, Harris B, Roseberry AM; Gerstin EH, Peralta CH, David MH, Panzer SR, Flores V, Daffo A; Marwaha R, Chen AJ, Chang SC, Au AP, Inman RR;

response in a patient. The protein can also serve as a target that modulate gene expression or activity and as an antigen to raise polyclonal or monoclonal antibodies. (Il is useful for identifying agents that modulate expression of the protein or agents, such as agonists or antagonists. The agonists or antagonists are useful for modulating biological activity and function of (II) and thus are useful for alleviating disease conditions such as allergic hypersensitivity, seasonal rhinitis, asthma, urticaria, atopic dermatitis or mastocytosis

WPI; 2003-371981/35 P-PSDB; ADC31731 New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet discrders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

Claim 1; SEQ ID NO 842; 1185pp; English.

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC3089) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody adjainst a polypeptide of the invention; an antibody polynucleotides or polypeptides of the invention; and methods of invention further discloses methods of the invention. The amount of monitorating a medical condition; kits comprising polynucleotide probes of invention further discloses methods of peventing, treating or ampliorating a medical condition; kits comprising polynucleotide probes of invention further discloses methods of peventing, treating or ampliorating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the connected by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC33049). The nucleic acids and polypeptides of the invention are useful in diagnostics drug sequences or sessessing biodiversity, and in producing many other types of also used for treating diseases and other neurodegenerative diseases. Altheimer's disease and other neurodegenerative diseases, Altheimer's diseases and nother neurodegenerative diseases. Altheimer's diseases and nother neurodegenerative openage of the invention probes or primers, wounds, burns, ulcers, osteoporosis, anaemia, platelet disorders, w ftp.wipo.int/pub/published\_pct\_sequences.

Novel isolated nucleic acids that are differentially expressed in mast cells in patients with allergic hypersensitivity, encoding proteins associated with mast cell regranulation and allergic hypersensitivity. P-PSDB; ABB77569.

Einstein R;

Nocka K, Pirozzi G, WPI; 2002-508560/54.

(UNIO ) UCB SA.

Claim 1; Page 95-97; 119pp; English.

The invention relates to isolated nucleic acid (ABN81319-ABN81324), corresponding to genes differentially expressed in mast cells following activation or in patients with allergic hypersensitivity disease, (I) that encodes proteins (ABB7756-ABB77575) (II) or a protein fragment of (II) if at least 6 amino acids. (II) is useful for identifying binding partners. (I) or (II) is useful for diagnosing or treating a disease state (e.g. allergic hypersensitivity, seasonal rhinitis, asthma, urticaria or atopic dermatitis or mastcoytosis) in a subject which involves determining the level of expression of (I) or (II). A computer system, comprising a database containing information identifying the expression level in a tissue or at least one mast cell of (I), is useful for presenting information to identify the relative expression level of (I). (II) is used as a marker to detect, diagnose or identify an allergic
